

THE MOST REALISTIC WEATHER ENGINE FOR FS2004, FSX AND PREPAR3D

Experience weather like never before in your simulator!

FS Global Real Weather provides the most realistic simulation of real world weather conditions for Microsoft Flight Simulator 2004, FSX and Lockheed Martin's Prepar3D to date. By using many real-world weather sources - used by real airlines and flight planning tools every day - it creates believable, accurate real-world weather conditions with global coverage.

More than just converting METAR reports!

Real-Life weather is much more than just a collection of METAR reports. FS Global Real Weather provides an accurate simulation of the atmosphere, collecting thousands of records of real-world weather data to provide realistic conditions from the ground up to FL520!

Highly realistic winds, temperatures, icing and turbulence up to FL520!

FS Global Real Weather delivers accurate winds and temperatures from field elevation up to FL520 for the entire world. Our wind smoothing algorithm avoids nasty bugs in the FS2004, FSX and P3D weather engine and prevents unrealistic sudden wind shifts due to interpolation bugs in both simulators – no more overspeed crashes! Experience an accurate icing and turbulence simulation with global coverage.

Accurate cloud types and realistic cloud formations!

Our weather engine depicts accurate cloud types from real-world data sources (where available) and chooses them on a highly sophisticated atmospheric simulation model for areas not covered by real-world data. Have you ever found yourself standing in London Heathrow on a cold winters day looking up to a layer of big fat cumulus clouds? Not in reality and not with FS Global Real Weather!

Hurricanes, Tropical Cyclones and local weather phenomena!

FS Global Real Weather provides accurate hurricane and tropical cyclone depiction derived from real-world data. On top of this our weather engine also simulates local weather phenomena specific to certain airports or regions.

Compatible with FSX ATC and AI Traffic from take off to landing!

Our weather engine is fully compatible with FSX ATC and AI Traffic – no more manual resetting of AI traffic and planes taking off or landing in wrong directions.
